

Make a single sketch part

1. Open a new part - project “training”
2. Use rulers to measure the block shapes
3. Make shapes in 2D sketch mode.
4. Extrude
5. Color part
6. Save each part as “block#”

If you have extra time, you may try making other shapes such as triangles or octagons. Try overlapping or inserting shapes inside of shapes and see what happens when you extrude.
